Animation is process of making shape changes and creating motions with elements.

## @keyframes

Keyframes will control the intermediate animation steps in CSS3.

### Example of key frames with left animation

```
@keyframes animation {
  from {background-color: pink;}
  to {background-color: green;}
}
div {
  width: 100px;
  height: 100px;
  background-color: red;
  animation-name: animation;
  animation-duration: 5s;
}
```

The above example shows height, width, color, name and duration of animation with keyframes syntax

### Moving left animation

```
<html>
  <head>

    <style type="text/css">
      h1 {
        -moz-animation-duration: 3s;
        -webkit-animation-duration: 3s;
        -moz-animation-name: slidein;
        -webkit-animation-name: slidein;
      }
      @-moz-keyframes slidein {
        from {
          margin-left:100%;
          width:300%
        }
        to {
          margin-left:0%;
          width:100%;
        }
      }
      @-webkit-keyframes slidein {
        from {
          margin-left:100%;
          width:300%
        }
        to {
          margin-left:0%;
          width:100%;
        }
      }
    </style>

  </head>
  <body>
    <h1>Tutorialspoint</h1>
    <p>this is an example of moving left animation .</p>
    <button onclick="myFunction()">Reload page</button>
  </body>
</html>
```

```

<script>
    function myFunction() {
        location.reload();
    }
</script>
</body>
</html>

```

It will produce the following result –

## Moving left animation with keyframes

```

<html>
    <head>

        <style type="text/css">
            h1 {
                -moz-animation-duration: 3s;
                -webkit-animation-duration: 3s;
                -moz-animation-name: slidein;
                -webkit-animation-name: slidein;
            }
            @-moz-keyframes slidein {
                from {
                    margin-left:100%;
                    width:300%
                }
                75% {
                    font-size:300%;
                    margin-left:25%;
                    width:150%;
                }
                to {
                    margin-left:0%;
                    width:100%;
                }
            }
            @-webkit-keyframes slidein {
                from {
                    margin-left:100%;
                    width:300%
                }
                75% {
                    font-size:300%;
                    margin-left:25%;
                    width:150%;
                }
                to {
                    margin-left:0%;
                    width:100%;
                }
            }
        </style>
    </head>
    <body>
        <h1>Tutorials Point</h1>
    </body>

```

```
<p>This is an example of animation left with an extra keyframe to make text changes.</p>
<button onclick="myFunction()">Reload page</button>
<script>
  function myFunction() {
    location.reload();
  }
</script>
</body>
</html>
```

It will produce the following result –
